A large graphic on the right side of the page. It features a mouse's head in the upper right corner, looking towards the center. Below the mouse is a large, stylized target graphic with concentric green and black circles. The text "Target Your Pests" is written across the target in a large, bold, green font with a white outline.

Target Your Pests

PCT Ramik *Green* Rodenticide | a PCT product

RAMIK Green Rodenticide

The Advanced Bait System..

We have defined a baiting system as a delivery method which has undergone scientific refinement. While the toxicant in the bait is important in a bait system, greater emphasis should be placed on the quality of the carrier. Current research suggests that the quality of the carrier (bait) is actually more important than the active chemical, since it has to compete with all other foods available to the rodent – no bait can work *unless* it's consumed.

A Bait System must be:

- Palatable
- Effective
- Easy to apply.

RAMIK *Green* is a premium quality product, providing all the necessary attributes in combination with innovative technology to produce a rodenticide which:

- Is preferred by rats and mice rather than foods found either in the natural environment or those found in the human environment.
- Is proven to be effective in extensive field trials.
- Is easy to apply, requiring minimal handling
- Is designed to withstand moist weather conditions.

RAMIK *Green*...
is highly palatable!

The RAMIK *Green* Advanced Bait System is a blend of multiple table-quality grains, sweetener, fish flavoring and active, combined into a nugget that's exceptionally palatable to rats and mice. Acceptability of the bait is no problem— independent research tests have demonstrated laboratory mouse preference for RAMIK 33% higher than non-toxic meal. RAMIK ensures a control system that rodents will consume— in fact, *prefer*, over competitive food sources.

RAMIK *Green*...
stays fresh because it's
weather resistant!

RAMIK *Green* is specifically formulated to resist the moist conditions often encountered in and around commercial and industrial premises, especially food manufacturing and slaughterhouse facilities. Utilizing proprietary technology, RAMIK is the only registered rodenticide that's weather-resistant without containing paraffin— a substance which can reduce palatability to rodents. Because RAMIK is weatherable without any wax content, acceptability and freshness are ensured!

RAMIK *Green*...
is effective!

The RAMIK *Green* Advanced Bait System features an anticoagulant action of the active ingredient, working slowly in the body of the rodent, and resulting in death occurring within 5 to 7 days. This action prevents "bait shyness" from occurring, but at the same time it ensures that an effective antidote is available in the event of accidental ingestion. Vitamin K₁ and blood transfusions constitute the recommended antidote.

RAMIK *Green*...
is easy to apply!

The RAMIK *Green* Advanced Bait System is packaged in a convenient 10kg plastic pail of bait nuggets or 6x50g sachets which can be inserted into bait boxes, or handled individually (gloves recommended).

RAMIK *Green*...
solves rodent problems!

The RAMIK *Green* Advanced Bait System will prove to be especially effective at providing long-lasting solutions to persistent rodent problems when supplemented by a housekeeping program which includes items such as:

- Vegetation control, by use of herbicides or manual reduction.
- Harbourage removal, by implementation of a cleanup of stored items inside or externally.
- Exclusion, by closing entry holes or other building modification to deny entry.
- Sanitation, by ensuring no accumulation of spilled food / feed items occurs in production or storage areas of premises.

Ramik Rodenticide Bait Products

Diphacinone, an extremely effective indandione class anticoagulant rodenticide is contained in all Ramik bait formulations. Ramik Green is one of a kind, 'ultimate all-weather rodenticide for controlling rats and mice indoors and outdoors.' The Ramik Green bait system uses food processing technology to produce an unusually palatable and highly-attractive bait that retains its freshness, sweetness and effectiveness in a long-lasting nugget form. The locked-in freshness and fish flavor gives Ramik Green the taste and high protein appeal that rodents can't resist, even under the most difficult weather and baiting conditions.

Two sizes of these all-weather bait nuggets are manufactured for a wide variety of uses against rodent pests:
