

# Gamma herbicide

## 200 g/L GLUFOSINATE-AMMONIUM

For the non-residual control of over 80 species of broadleaf & grass weeds as well as annual & perennial grasses.

Check out overleaf for details.

# GAMMA

## HERBICIDE

**ACTIVE CONSTITUENT: 200 g/L GLUFOSINATE-AMMONIUM**

Surefire GAMMA non-volatile herbicide, containing 200g/L Glufosinate-Ammonium, is now registered for use in the control of many annual & perennial broadleaf weeds & grasses in orchards, vineyards & olive plantations . Surefire Gamma is absorbed by plant foliage and green stems.

Surefire Gamma Herbicide may be used around trees/vines less than two years old provided they are effectively shielded from spray and spray drift.

The recommended rate of use is determined by the following criteria:

**WEED SPECIES:**

Apply the appropriate rate to control the least susceptible weed present as per the lists of weeds controlled in the accompanying tables.

**WEED STAGE OF GROWTH:**

Use the lower rate when weeds are young and succulent (grasses: pre-tillering; broadleaves: cotyledons to 4-leaf) or the population is very sparse.

A median rate should be used for medium sized plants (grasses: tillering; broadleaves: 4-leaf to advanced vegetative) and the high rate should be used when weeds are mature (grasses: nodding to flowering; broadleaves: budding to flowering).

**WEED DENSITY:**

Use the higher rates when the weed population is dense. Thorough coverage of weeds is essential for good control.

**CLIMATIC CONDITIONS:**

Best results are achieved when applied under warm humid conditions. Control will be reduced and/or slower under cold conditions and/or overcast conditions. Good results will be achieved under most other conditions, however poor results may occur under hot, dry conditions (temperature above 33°C with a relative humidity below 50%).

Weeds that have been hardened or stunted in growth due to stressed conditions should be treated at the maximum rate.

**COVERAGE:**

Complete coverage of weeds is essential for good control. Poor coverage may result in re-growth.

**PERENNIAL WEEDS:**

Apply when weeds are actively growing. Follow-up treatments will be necessary to control re-growth of perennial weeds in most cases.

Note: Gamma is suitable for application by ground sprayers, boom sprayers, directed spray Equipment, knapsack/ handgun and controlled droplet application equipment. It is not suitable for aerial application.

Container sizes:	Carton quantity:
1 litre	5
5 litre	4
10 litre	unit
